

## PRODUCT INFORMATION

### **COROPUR INSULATING PRIMER**

moisture curing polyurethane primer for overcoating of solid old paint

|                                     |  |
|-------------------------------------|--|
| <b><u>Product Description</u></b>   | Coropur adhesion and insulating primer is a single-component, moisture-hardening primer with aluminium pigments. This primer is used as insulating bonding agent for the renovation of old corrosion protection coatings and surfaces where abrasive blasting is not possible for environmental and/or economical reasons.   |
| <b><u>Binding Agent</u></b>         | Aromatic polyisocyanate  |
| <b><u>Pigments</u></b>              | Aluminium, talc  |
| <b><u>Solvent</u></b>               | Aromatic hydrocarbons  |
| <b><u>Fields of Application</u></b> | <p>1. Sealing and compacting of old coatings based on various resins such as epoxy resins, chlorinated rubber, alkydes, resin acrylates, bitumen acrylates, oil acrylates, PVC acrylates, polyurethane etc.<br/> <b>Attention:</b> In case of old coatings prior adhesion and holiday detection tests are highly recommended.</p> <p>2. For manual derusted steel surfaces with residual rust.</p> <p>3. Temporary corrosion protection.</p> |
| <b><u>Surface Preparation</u></b>   | Loose, non adhering paint has to be removed. Thick layers of rust and rust nests must be removed mechanically by spot blast or – in case blasting is not possible – by grinding, hydropressure or wire brush. A regular roughness profile for better adhesion of Coropur Insulating Primer has to be assured.  |
| <b><u>Coating Suggestion</u></b>    | <p>The following intermediates or cover coatings are suitable for Coropur Insulating Primer:</p> <ul style="list-style-type: none"> <li>- Coropur TAR                      - Coropur TAR 21</li> <li>- Coropur Ferro                    - Coropur Cover Ral...</li> <li>- Coropur Alu                        - Coropur Non Abrasiv</li> </ul>  |
| <b><u>Application Methods</u></b>   | Brush, roller or airless spray   |
| <b><u>Layer Thickness</u></b>       | 40 µm - 70 µm per layer  |
| <b><u>Viscosity</u></b>             | 40 DIN 4, 500 – 600 mPas   |
| <b><u>Thinner</u></b>               | Thinner A-851 Rolling. Quantity of admixture of thinners depends on ambient temperature and type of processing   |
| <b><u>Equipment Cleaning</u></b>    | Thinner A-851 or Thinner T-1900  |
